

About Dental Implants

Q. How long does a dental implant procedure take?

A. On average, total treatment time is about 3-6 months to replace a single tooth or multiple teeth. If bone grafting and/or extraction is needed, treatment timeline may be extended 4-6 months.

Q. Is a pain normal after implant surgery?

A. Some minor pain, swelling and discomfort are normal after surgery. Some bleeding is also common for the first 24-48 hours after surgery. The implant site should be healed within about 2 weeks after surgery, If a patient still experiencing pain and discomfort after 2 weeks, visit a clinician to get proper solution and cause of the pain.

Q. Diet after implant surgery

A. A soft, non-chewing diet is recommended for 10 days to 2 weeks after surgery to allow the gum tissue to heal. Ask your clinician for any diet plans or instructions.

Q. How long can the implant be last?

A. A successfully restored dental implants can be used for a long period of time if you regularly visit a clinician and manages it steadily.

We promise to continuously provide high quality and service based on our experience to more than 30 countries.
